

AireSpring Global SD-WAN

Combining the power of SD-WAN with the reliability of our Global Enterprise-Grade Private Network

AireSpring's Global SD-WAN delivers the benefits of SD-WAN with a global private network, bypassing the unpredictability of the public internet over long distances and providing a reliable, holistic network.

Two Options for Connectivity:

1. VeloCloud NSX SD-WAN Edge appliance.
2. AireSpring SimpleConnect VPN with no appliance needed.

The Power of Global SD-WAN

Cloud platforms, SaaS applications, video and voice are all business-critical for modern global enterprises, producing an increasing amount of traffic to and from the cloud.

Built on the layered strength of an SD-WAN solution with the power of the AireSpring Global Private Network, AireSpring's Global SD-WAN advances connectivity to a new level, taking down barriers that formerly challenged global enterprises, and solving problems like quality of service over longer distances and regulatory restrictions in some geographic locations.

A combination of multiple low-cost carriers overlaid with SD-WAN allows most businesses to achieve a cost-effective, enterprise-grade network solution. However, this solution is not good enough for the modern distributed enterprise with multiple offices and data centers in geographically diverse locations.

Global SD-WAN addresses the need for increased bandwidth by combining the power of multiple connections. Enterprises can combine low-cost internet with carrier-grade MPLS and route data based on relative importance, resulting in overall lower costs. Global SD-WAN also simplifies the branch network, making implementation and management more agile with the use of virtualized network services at the edge.

Value of AireSpring's Global Private Network (GPN)

SD-WAN relies on the internet to keep costs low and leverage its true benefits. At the same time, the internet can suffer from issues like latency, packet loss and jitter, problems that are severely aggravated with longer distances. Connectivity into certain geographic areas can be especially limited due to regulatory restrictions. All of these factors together can decrease the overall value of SD-WAN.

AireSpring's Global SD-WAN provides a single solution that allows branch offices to connect to the closest GPN PoP and obtain end-to-end enterprise-grade connectivity to all their offices.

AireSpring's Global Private Network utilizes a redundant design with globally distributed PoPs interconnected to a fully meshed backbone, providing customers with highly reliable connectivity, all backed by a world-class service level agreement (SLA), regardless of customer location.

"AireSpring's Global SD-WAN provides a single solution that allows branch offices to connect to the closest GPN PoP and obtain end-to-end enterprise-grade connectivity to all their offices."

AireSpring Global SD-WAN Advantage

- **Access a Global Private Network:** Bypass the unpredictability of the internet over long distances using our reliable, high performance Global Private Network.
- **Extend your global footprint:** Obtain internet connectivity into locations that are heavily regulated by using direct border gateway protocol (BGP) peering to all Tier 1 Carriers.
- **Complete Visibility:** Monitor and configure your network using our sophisticated web-based SD-WAN portal.
- **Scale and grow with ease:** Activate and deploy new sites and services in days, anywhere in the world, and rapidly scale bandwidth as your needs change.
- **Secure your end-to-end network traffic:** Gain access to a highly secure network using a combination of our secure Global Private Network and VeloCloud's PCI verified and compliant solution, or choose SimpleConnect, which allows customers to quickly add their locations for rapid connectivity into our Global Private Network, without the need for an on-site appliance.
- **Personalized Service:** AireSpring delivers outstanding customer service, featuring one bill and a single point of contact for all your service needs.
- **Reduce costs:** Keep costs low and simplify branch office complexity.
- **Expand your bandwidth cost-effectively:** SD-WAN can enhance your internet connection by using low-cost, public broadband or internet connectivity to expand your bandwidth with active/active routing.
- **Fully Managed Service:** Benefit from AireSpring's premium implementation, design and engineering services, as well as 24/7/365 network monitoring, all at no additional cost.

AireSpring has received numerous industry awards for "Product of the Year," "Best Telecom Deal," "Members Choice Top Reseller," "Best in Show," and "Top Channel Program."
