Adding Yealink SIP-T54W to the BG Admin

Accessing the CommPortal BG Admin interface

To configure BG lines, and to manage their BG's lines and services, a BG Administrator should log in to the CommPortal BG Admin interface using a separate login page to regular users. For example, a BG Administrator might log in at <https://commportal.airespring.com/bg> . The BG Administrator login page sends the BG Administrator to the BG Administrator section of the default web UI.

CommPortal is supported on the latest versions of all major browsers and operating systems. This includes:

Microsoft Internet Explorer version 11

Edge

Firefox version 3 or later

Google Chrome (Windows only)

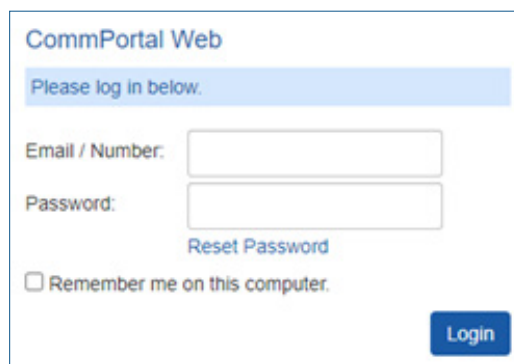

Safari version 5 or later (Mac OS X only)

It is supported on the following operating systems:

- ▶ Microsoft Windows Vista
- ▶ Microsoft Windows 7
- ▶ Microsoft Windows 8
- ▶ Microsoft Windows 10
- ▶ Mac OS X 10.6
- ▶ Snow Leopard and later, although some features are only supported by later versions JavaScript must be enabled.

Logging into CommPortal BG Admin

The following shows a sample CommPortal login page.

The image shows a web browser window titled "CommPortal Web". Inside the window, there is a light blue header bar with the text "Please log in below.". Below this, there are two input fields: "Email / Number:" and "Password:". To the right of the "Password:" field is a link that says "Reset Password". Below the input fields is a checkbox labeled "Remember me on this computer.". At the bottom right of the form is a blue button with the text "Login".

FIGURE 1: COMMPORTAL LOGIN PAGE

To log into CommPortal, follow these steps:

Enter a phone number with administrative access.

Enter the password.

Click on Login.

If this is the first time you have logged in, you will be prompted to change your password.

Using CommPortal BG Admin

Once you are logged into CommPortal you will see the Business Group Administrator's homepage.

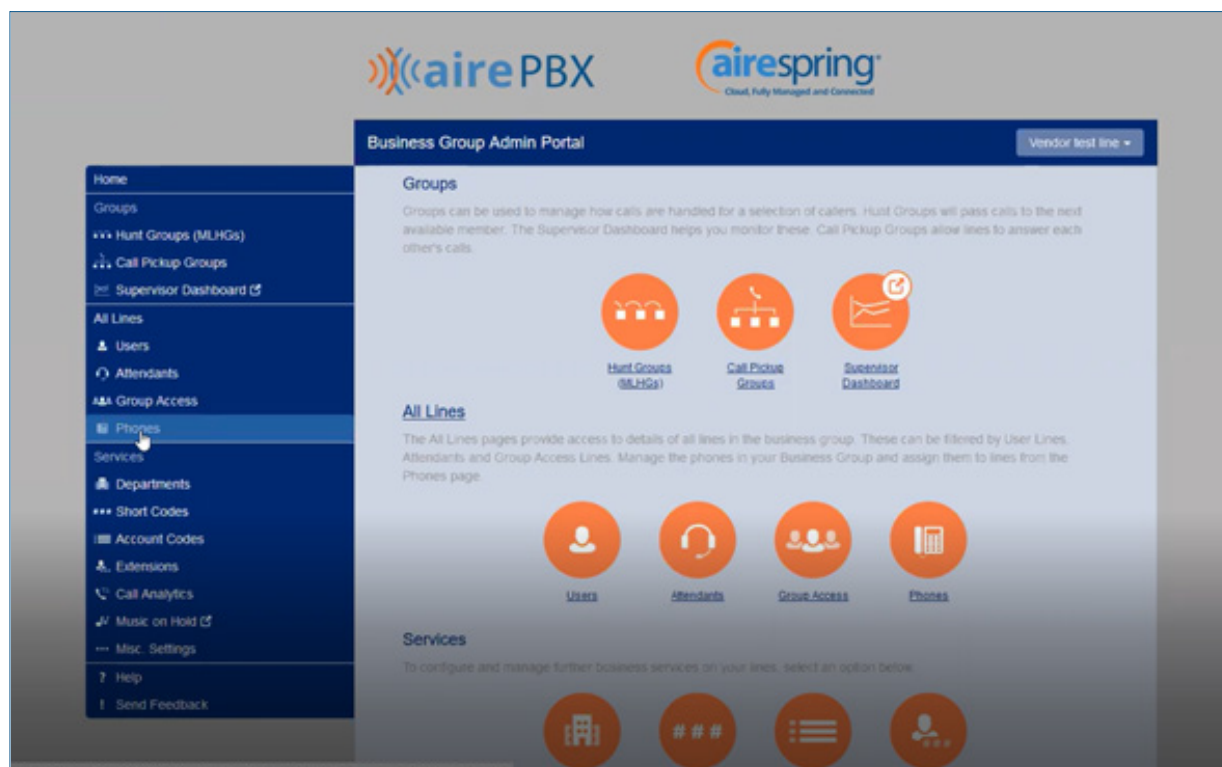

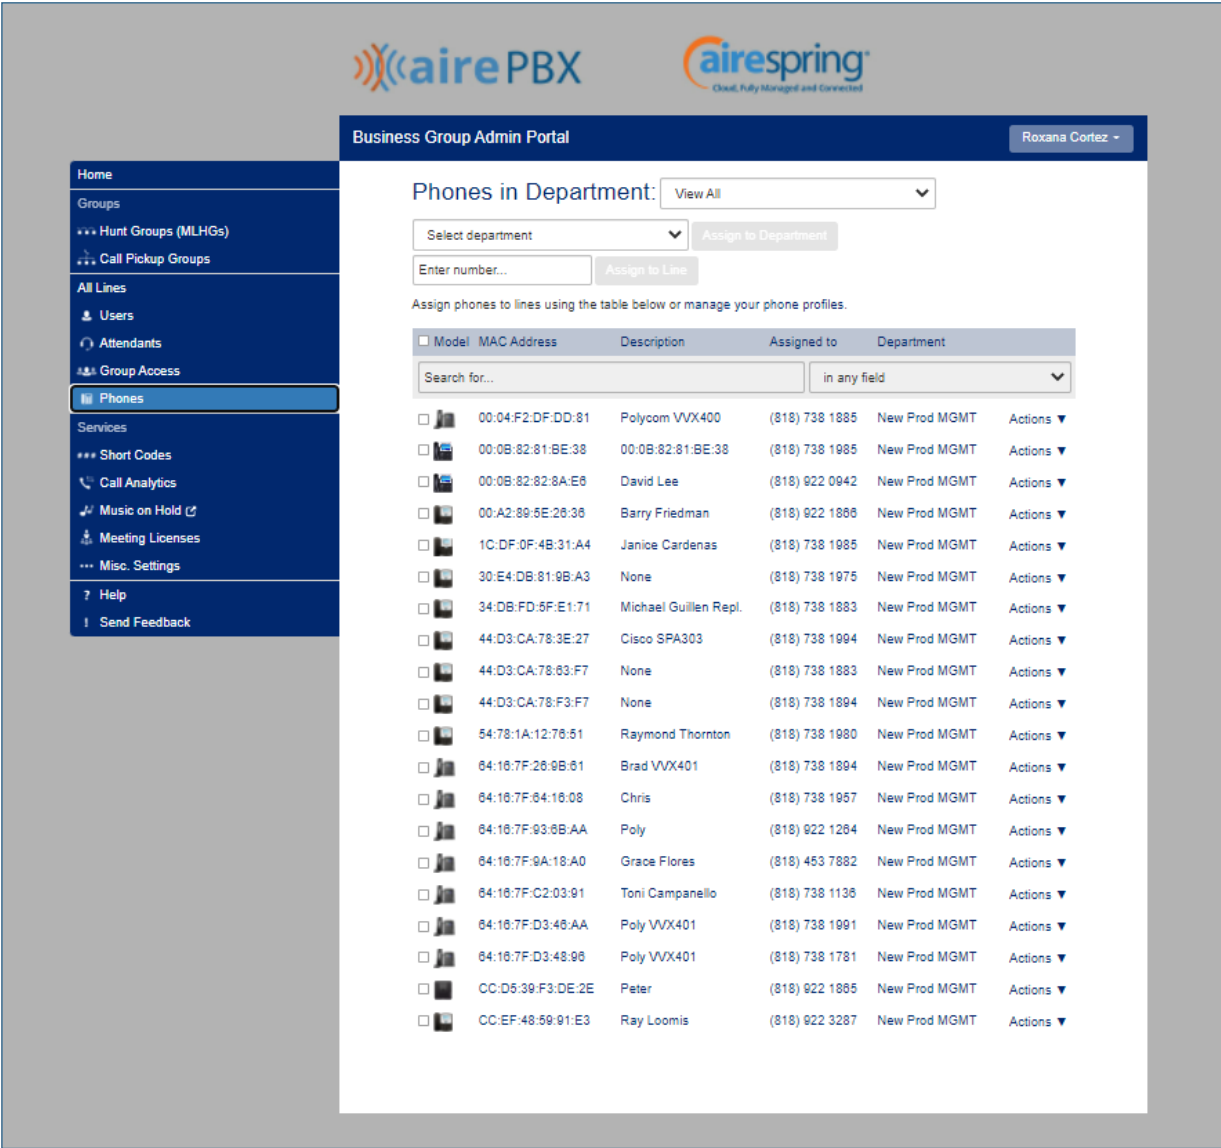

Figure 2: CommPortal Business Group Administrator homepage

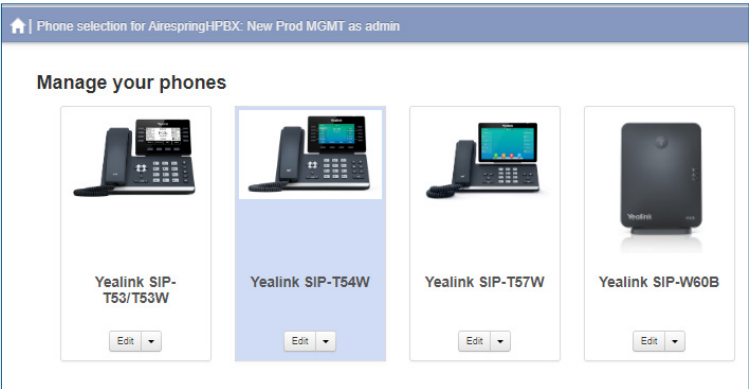

Click on Phones section at the left-hand side – you can view different departments in case customer have multisite locations.

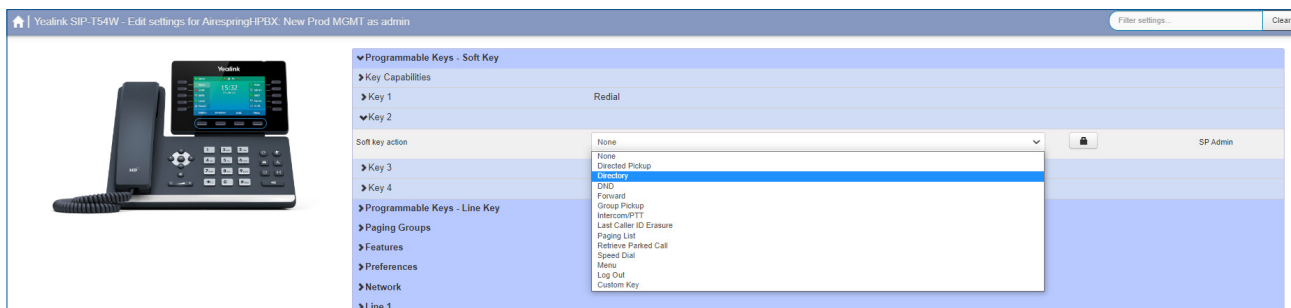

Building a new phone profile for users

Select a department if the phone model to be added is specific to one location. If the profile is to be used for the entire business, leave blank. Click on *manage your phone profile*

On the next screen select Create a new profile at the bottom of the page
Then select Yealink SIP-T54W
The profile has been created on the BG Admin

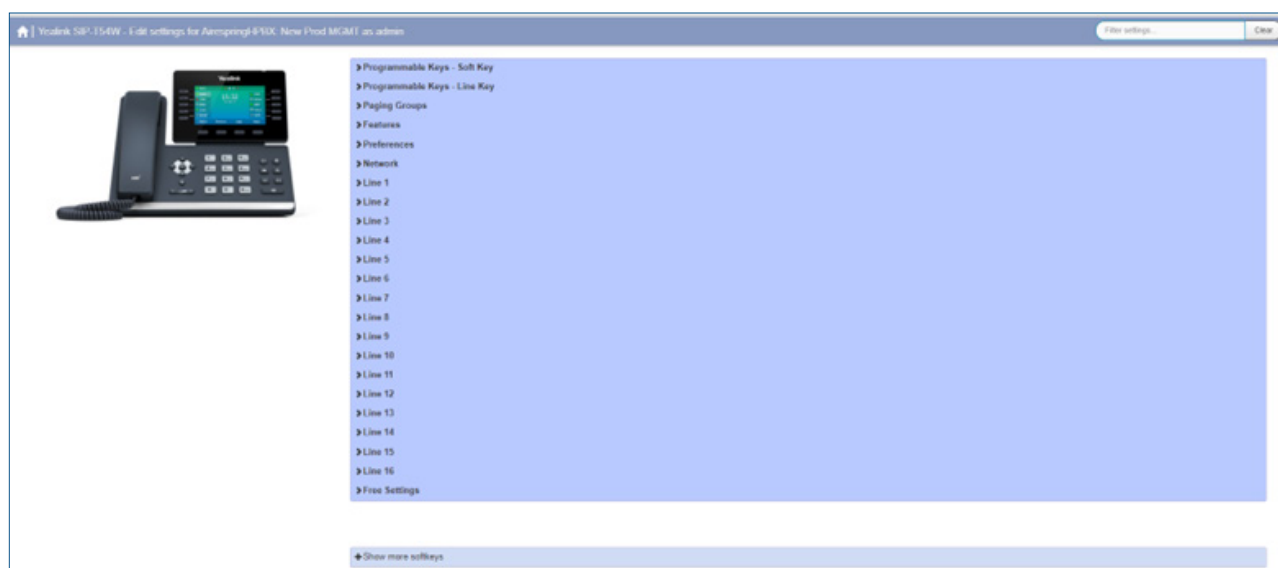

Programmable keys – Line key

The Line Keys capabilities

Click on edit and this will display the programing soft keys option

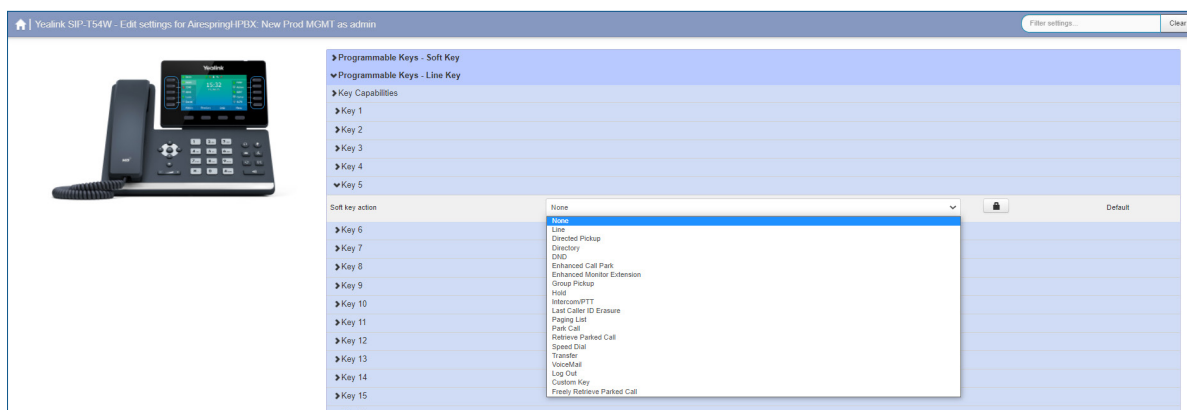

Key Capabilities

In this section you will be able to enable and disable lines, Direct Pickup, DND, Enhanced Call Park, Enhanced Monitor, Extension, Forward, Group pickup, Hold, Intercom / PTT, KeyPad Lock, Last Caller ID Erasure, LDAP, Paging List, Prefix, Retrieve Parked Call, Speed Dial, Transfer, VoiceMail, Park Call, Log Out, Freely Retrieve Parked Call.

Key 1 will always be assigned to Line 1

Keys 2 through 27 will allow the following options:

The possible options are as follows:

- ▶ None – this is used when a key is not assigned a function.
- ▶ Line - It configures the LineKey and the soft action you'd like.
- ▶ Directed Pickup – this configures the key as a speed dial to pick up calls ringing on a particular line.
 - Enter the number of the extension you want to pick up calls for in the box provided.
- ▶ Directory – this configures the key to provide you with the phone's list of contacts. Note: Aastra phones only.
- ▶ Do Not Disturb – configures the key as a Do Not Disturb.
- ▶ Enhanced Call Park – configures a key to park to and monitor a specific orbit
- ▶ Enhanced Monitor Extension - allow you to monitor another user's phone activity
- ▶ Group Pickup – this configures the key as a speed dial for the Group Pickup service
- ▶ Hold
- ▶ Intercom/PTT – this configures the key to launch a paging call
- ▶ Last Caller ID Erasure – this configures the key as a speed dial to call the access code which clears the network list of your recent calls.
- ▶ Paging List – display and access the subscribed paging groups
- ▶ Park Call –Park the call into a system generated park orbit, upon transfer the system will echo the selected park orbit the call is placed into.
- ▶ Retrieved Parked Call – Retrieve a parked call from a specified orbit. Change access code to *54

- ▶ Speed Dial – this configures the key as a speed dial.
 - Enter the number you want this Speed Dial to call in the box provided.
- ▶ Transfer – this configures the key to transfer a call.
- ▶ VoiceMail – this configures a key to access voice mail
- ▶ Log out – used for Hotdesking/Hoteling. Login via CommPortal credentials.
- ▶ Custom Key – assigned by Service Provider for special functions that are not currently available in the profile.
- ▶ Freely Retrieve Parked Call retrieve a parked call, set the retrieve code to *54 and match the Orbit Number Length field to match the orbit length in use

Whichever option you chose for your key you may enter a label for the key. If your phone has a display next to the key, you configured this label will be shown on the phone display.

Once you have finished configuring your key click on OK. The picture of the phone will be updated with the label you gave your new key assignment after the next reboot or nightly configuration pull.

Paging groups

You can make pages and listen to up to 10 paging groups.

Enter the IP multicast IP address of the network (usually 224.0.0.1), leave the port at 10000, and assign the channel you want to use for the group.

The 10 paging groups are separated into Listening and Paging groups. You do not have to Listen to a group if you only need to be able to page into the group.

If you do not want to have calls, automatically put on hold when a new page is received set the Priority Paging Group under Paging Groups / Settings to 0. This will ignore any incoming pages while the phone is engaged in a call.

Features
