

Premium Internet Access China

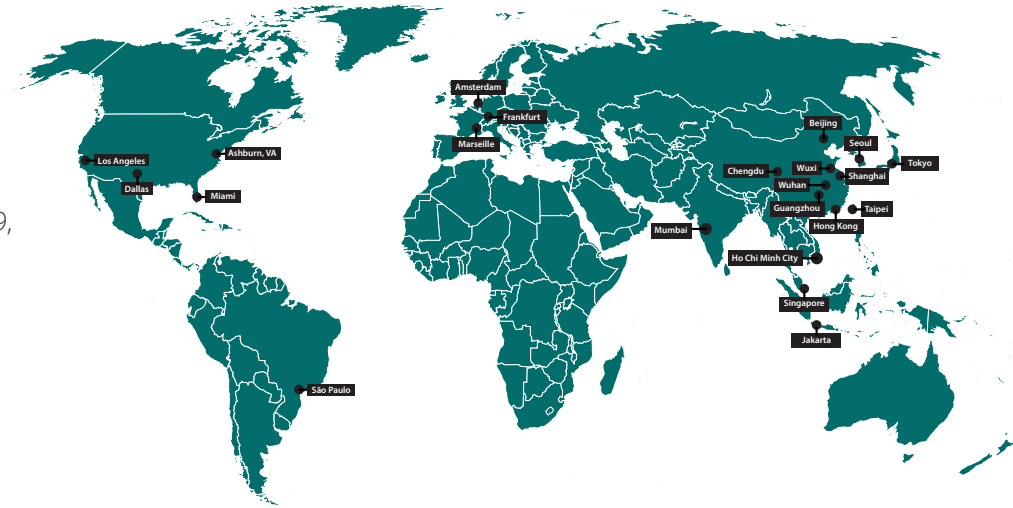

AireSpring's Premium Internet Access China (PIAC) is a superior internet service for mainland China that provides optimal internet access to global resources from locations within China.

IT Managers with responsibility in China face challenges unique to this specific region. For example, regular direct internet access or DIA services in this region can limit or even restrict access to global applications such as Office 365, Salesforce, G-suite, and other cloud-based apps and ERP systems. PIAC enables unobstructed access to global resources for users in China.

AireSpring's PIAC service includes an SD-WAN edge appliance by VMware®, named a leader in Gartner's 2021 report on WAN Edge Infrastructure. Built on the layered strength of this industry-leading SD-WAN solution combined with the AireSpring Global Private Network (GPN), PIAC advances internet connectivity in China to a new level. PIAC eliminates the barriers that formerly challenged multi-national enterprises, solving problems like quality of service (QoS) over longer distances and regulatory restrictions in some geographic locations.

Benefits of AireSpring's PIAC:

- **Uninterrupted Access to Global Resources:** Uninterrupted access to services such as Office 365, Salesforce, G-suite, and other cloud-based apps and ERP systems.
- **Stabilize Internet Access with AireSpring's Global Private Network and SD-WAN:** Bypass the unpredictability of the internet over long distances using our reliable, high performance Global Private Network in combination with VMware SD-WAN.
- **Fully Managed Service:** Benefit from AireSpring's premium implementation, design, and engineering services.
- **Personalized Service:** AireSpring delivers outstanding high-touch customer service, along with one bill and a single point of contact for all your service needs.

The AireSpring Global Advantage™

- **Access a Global Private Network:** Bypass the unpredictability of the internet over long distances using our reliable, high performance Global Private Network.
- **Extend your global footprint:** Obtain internet connectivity into locations that are heavily regulated by using direct border gateway protocol (BGP) peering to all Tier 1 Carriers.
- **Scale and grow with ease:** Activate and deploy new sites and services in days, anywhere in the world, and rapidly scale bandwidth as your needs change.
- **Global Internet Sourcing:** AireSpring acts as a global internet service provider to source, implement, and support your international connectivity needs.
- **24/7 Link Monitoring:** Our AireNMS monitoring solution provides 24/7 proactive monitoring, troubleshooting and repair provided by our global network operations center (NOC).
- **Secure your end-to-end network traffic:** Gain access to a highly secure network using a combination of our secure Global Private Network and VMware SD-WAN's PCI verified and compliant solution.
- **Complete Visibility:** Monitor and configure your network using our sophisticated web-based SD-WAN portal.
- **Fully Managed Service:** Benefit from AireSpring's premium implementation, design and engineering services.
- **Reduce costs:** Keep costs low and simplify branch office complexity.
- **Personalized Service:** AireSpring's signature high-touch, customer service delivers outstanding, white glove, 24/7/365 support. Additionally, we provide one bill and a single point of contact for all your service needs.

AireSpring has received numerous industry awards for "Product of the Year," "Best Telecom Deal," "Members Choice Top Reseller," "Best in Show," and "Top Channel Program."
